COTIF base convention and Appendices - relation to EU and UN rules

COTIF : Convention concerning International Carriage by Rail

INTEROPÉRABILITÉ JURIDIQUE

Appendix A
CIV
Uniform Rules concerning the Contract of International Carriage of Passengers by Rail

Appendix B
CIM
Uniform Rules concerning the Contract of International Carriage of Goods by Rail

Appendix C
RID
Regulation concerning the International Carriage of Dangerous Goods by Rail

Appendix D
CUV
Uniform Rules concerning the Contract of Use of Vehicles in International Rail Traffic

Appendix E
CUI
Uniform Rules concerning the Contract of Use of Infrastructure in International Rail Traffic

Appendix F
APTU
Uniform Rules concerning the Validation of Technical Standards and Adoption of Uniform Technical Prescriptions applicable to Railway Material

Appendix G
ATMF
Uniform Rules concerning the Technical Admission of Railway Material used in International Traffic

INTEROPÉRABILITÉ TECHNIQUE
## EU and OTIF regulations: complementary regulations

Exchange of vehicles

The classical model for international rail transport

Requires, e.g.:

- Wagons and passenger coaches approved for international operation
- Harmonised vehicle interfaces
- Clear responsibilities concerning vehicle maintenance
- Multiple railway undertakings to bring vehicle to its destination
Technical interoperability

Running complete trains safely across borders from departure to destination

Requires, e.g.:

- Rolling Stock approved for international operation
- Railway undertakings certified to operate in multiple States
- Infrastructure managers capable of working with different RUs
- Clearly define responsibilities at interfaces between RUs and IM
- Separation between State Authorities and national railway operator
Interoperability in COTIF

The objectives

1. Increasing efficiency of international railway transport by avoiding reconfiguration of trains at borders.

2. Without assumption of a market model; interoperability possible on a competitive or cooperative basis.

3. Infrastructure management and railway undertaking can be functions within one integrated organisation, or fully separate entities.

4. Compatible with railway systems in different States and regions, e.g. the European Union / the Gulf Cooperation Council / Silk road
1. The new Appendix H sets out principles concerning the safe operation of trains
2. The new Appendix does not regulate access rights for RUs to a network
3. Granting right of access to a network is subject to rules applicable in each State
4. States may declare not to apply the new Appendix H, e.g. States which do not want foreign RUs operating on their network
1. The new Appendix H sets out principles concerning the safe operation of trains.
2. Appendix H is intended to be applied by States which apply APTU and ATMF as these set the provisions for rolling stock to cross the border.
3. Detailed provisions should be developed as Annexes to the new Appendix.
4. The Committee of Technical Experts would be competent to adopt Annexes or to recommend methods and practices.
EU 4th railway package basic principles concerning the safe operation of trains in international traffic

Safety Certification (from 2019):

1. Certificates are issued to RUs on an European basis by the EU Agency for railways (ERA). ERA cooperates with the National Safety Authorities to take into account national provisions.

2. RUs are responsible for the safe operation of trains and checking the compatibility between trains and routes (based on registers).

3. NSAs supervise the RUs

4. ERA monitors the performance of NSAs
Safety Certification:

1. Certificates are issued to RUs on a state-by-state basis by the Certification Authority competent for each State.

2. States may agree to mutually recognise safety certificates or parts thereof (such as is already the case in the EU)

3. Conditions for mutual recognition should be defined
Draft new Appendix H to COTIF concerning the safe operation of trains in international traffic

Basic principles

States to ensure:

1. Trains are operated in international traffic in accordance with the new Appendix
2. National binding operational and safety rules are published (and must not conflict with COTIF rules, otherwise it would conflict with principle 1.)
3. RU and IM are responsible for safety and each must establish their SMS (even when part of one integrated railway organisation)
4. A Certification Authority is established
5. A Supervision Authority is established
6. These authorities must be independent from any RU or IM and can be national or international
Organisation intergouvernementale pour les transports internationaux ferroviaires
Zwischenstaatliche Organisation für den internationalen Eisenbahnverkehr
Intergovernmental Organisation for International Carriage by Rail
