

Leipzig, 19 May 2016

Declaration from Ministers on Green and Inclusive Transport

Agreed by the Council of Ministers of Transport at the 2016 Summit of the International Transport Forum in Leipzig, Germany

Preamble

Transport that is environmentally responsible, inclusive, efficient and economically sustainable will be central to implementing the commitments made at the United Nations Framework Convention on Climate Change (UNFCCC) 21st Conference of Parties (COP21) in Paris in December 2015 and achieving the UN Sustainable Development Goals. Recognition of transport's leading role comes with the duty to make the sector greener and more inclusive. Our challenge is to ensure affordable access for all and provide services for the trade and mobility on which our economies and wellbeing depend, while reducing impacts on the environment and public health.

Demand for transport is growing rapidly, with particularly strong growth coming from trade-driven freight transport and rapid or persistent motorisation in urban areas. Most of this growth is CO₂ intensive. The Paris Agreement on Climate Change opens a new era of initiative to secure a low- carbon future for transport. This will be essential to address the growing share of transport in global energy-related CO₂ emissions.

A combination of advances in renewable power generation and propulsion technology, managing demand along with changes in behaviour, as well as novel approaches to rationalising mobility and land use, will be necessary to address these challenges. At the same time, exogenous factors such as changing demographics, rapid urbanisation, new trade patterns and digital connectivity need to be factored in.

Our ability to respond to these challenges and opportunities will determine the effectiveness of the shift to green and inclusive transport.

We, the Ministers responsible for transport in the member countries of the International Transport Forum, have assembled under the Presidency of Denmark to seek mutual understanding of, and orient our response to, these challenges.

Decarbonising transport

We:

- ▶ **acknowledge** the dramatic increase in motorisation in countries and its impacts on climate change, air pollution, and public health, and **underline** the need to adjust transport operations and policies to reverse these impacts;
- ▶ **recognise** that the Paris Agreement on Climate Change and the UN Sustainable Development Goals will support integration of low-carbon transport policies in national and local initiatives to reduce the adverse effects of climate change and foster sustainable development across the ITF membership;
- ▶ **undertake** actions to promote initiatives and effective mechanisms that foster more sustainable transport;
- ▶ **encourage** enhanced coordination of transport and environmental policies across ministries and among all levels of authority, in order to better promote the shift to both green and inclusive transport, through aligned, cost-efficient and coherent policies;
- ▶ **actively support** the ITF's analytical work to help countries reduce transport-related carbon emissions and improve fuel efficiency, while enhancing transport safety and security.

Promoting inclusive transport

We:

- ▶ **agree** that transport plays a central role in providing access to jobs, education, goods and services as well as opportunities for all;
- ▶ **acknowledge** the vital role of public transport, as well as walking and cycling, in delivering inclusive access while reducing the carbon intensity of the transport sector, and thus the need to prioritise policies and investment for promoting these modes;
- ▶ **recognise** the need to co-ordinate transport and land-use planning and policies to foster social inclusion; in particular, the development of integrated transport and social housing policies that increase access to employment through proximity and affordable, high quality transport services;
- ▶ **advise** all relevant authorities and operators to intensify efforts to make transport infrastructure, equipment and services accessible to all travelers, including those with either permanent or temporary reduced mobility, in light of projected demographic change and the benefits that accessibility can bring for all travelers;
- ▶ **promote** a continued focus on assessing the economic, environmental and social benefits of inclusive and accessible transport for incorporation in project and policy appraisal;

- ▶ **support and facilitate**, wherever possible, the harnessing of new technology to make transport services and infrastructure accessible for all, from journey planning, to information provision and on-board facilities.

Transport modes serving green and inclusive growth

We:

- ▶ **affirm** that all modes of transport play an important role in fostering greener and more inclusive growth;
- ▶ **recognise** that growth in the maritime industry highlights the need for enhanced cooperation among transport stakeholders in order to promote the protection of the environment alongside sound framework conditions for the sector through continued collaboration in the International Maritime Organization;
- ▶ **acknowledge** that the forecasted growth of aviation will require measures to mitigate its impact on the environment, while adapting to climate change; in this regard;
- ▶ **support** efforts to agree a sustainable aviation framework according to the decisions of the International Civil Aviation Organization.
- ▶ **encourage** efforts to foster public transport and more efficient, modally integrated forms of individual and freight mobility in urban areas to improve safety and access and reduce congestion, CO₂ emissions, air pollution and noise;
- ▶ **promote** the modernisation and development of inland waterway transport to contribute to the sustainable transport of goods and passengers;
- ▶ **recognise** that investment in rail freight and combined transport can be effective in reducing the environmental impact of logistics chains;
- ▶ **encourage** focus on the sustainable development of international road freight transport;
- ▶ **recognise** that promoting quality transport infrastructure planning, maintenance and development contributes to transport sector resilience, mitigation of climate change impacts, as well as economic growth and social inclusiveness.

New technologies and digitalisation; enabling the shift towards green and inclusive transport

We:

- ▶ **welcome** the benefits to transport brought by the advances of new technologies and business and labour models, as well as digitalisation in enhancing the sustainability of transport infrastructure and services, and providing better access to transport services for all;

- ▶ **affirm** in particular that increased connectivity and automation in the transport sector carry the prospect for enhanced benefits for safety, efficiency, the environment and access to opportunity;
- ▶ **recognise** that data is essential to the planning, provision and management of transport services and infrastructure, and that there are great potential benefits to automated data and data-sharing between the public and private sectors;
- ▶ **acknowledge** that regulatory frameworks may need to be adjusted to accommodate this new economic dynamic, while protecting personal data, public health, the environment, and ensuring other economic and social benefits.

ABOUT THE INTERNATIONAL TRANSPORT FORUM**Who we are**

The International Transport Forum is an intergovernmental organisation with 57 member countries. It acts as think tank for transport policy and organises the Annual Summit of transport ministers. ITF is the only global body that covers all transport modes. The ITF is administratively integrated with the OECD, yet politically autonomous.

What we do

ITF works for transport policies that improve peoples' lives. Our mission is to foster a deeper understanding of the role of transport in economic growth, environmental sustainability and social inclusion and to raise the public profile of transport policy.

How we do it

ITF organises global dialogue for better transport. We act as a platform for discussion and pre-negotiation of policy issues across all transport modes. We analyse trends, share knowledge and promote exchange among transport decision-makers and civil society. ITF's Annual Summit is the world's largest gathering of transport ministers and the leading global platform for dialogue on transport policy.
