DATABASES AVAILABLE FOR CRASHES, INJURIES AND DEATHS

SECRETARIAT OF MOBILITY

- Geographic information system for road crashes (SIGAT)
- Source: Police crash report (IPAT)
- Contains record of crashes, injuries and deaths due to road crashes
- Relational database (Tables) and geo-referenced databases (GIS)

WHY THE NEED FOR MERGING DATA?

Hospital deaths
not reported to
traffic police

SOLUTION: MERGING DATA WITH THE FORENSIC SYSTEM

A large orange pentagon is centered on the left side of the slide. It is surrounded by a network of grey lines and dots, suggesting a data network or forensic system. The text 'FORENSIC SYSTEM' is written in white, bold, uppercase letters inside the pentagon.

FORENSIC SYSTEM

- Information system for deaths and injuries due to external causes (SIRDEC and SICLICO)
- Source of information: Forensic registry of necropsies and medical-legal valuations
- Contains record of injuries and deaths due to road crashes (includes all transportation modes)
- Relational database (Tables)

DEATHS DATABASE LINKING

DEATHS DATABASE LINKING (MONTHLY COMPARISON 2018)

SIGAT
514 Deaths

SIRDEC
522 Deaths

DIFFERENCES

- **Criteria**
 - ⑩ There are cases in which the Police and the forensic criteria differ regarding the external cause of death and an agreement cannot be reached. So in the police system the death is registered as different external cause (homicide, accidental or suicide) and in the forensic system it is registered as transit.

DEATHS DATABASE LINKING (MONTHLY COMPARISON 2018)

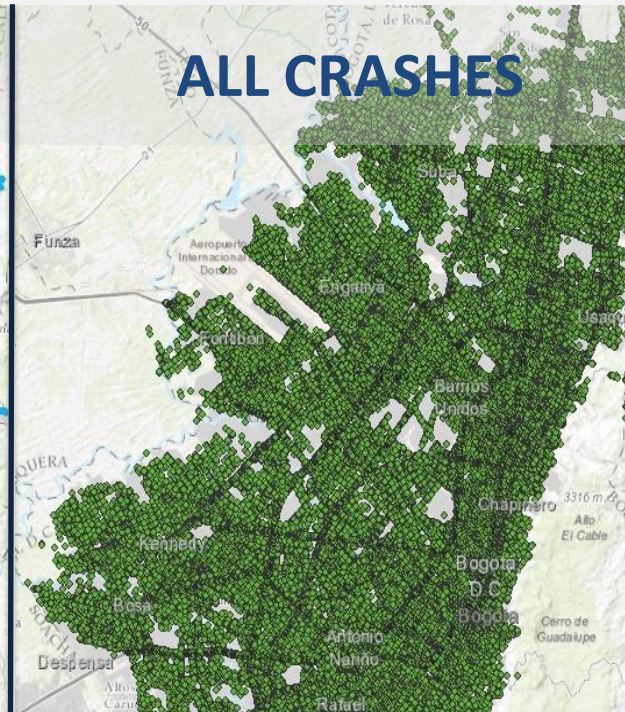

DATABASES GIS

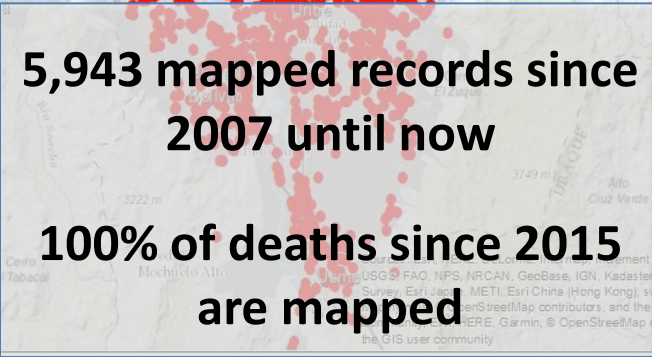

DEATHS

INJURIES

ALL CRASHES

5,943 mapped records since 2007 until now

100% of deaths since 2015 are mapped

166,697 mapped records since 2007 until now

91% of the injured in 2018 are mapped

382,127 mapped records since 2007 until now

90% of crashes in 2018 are mapped

MERGING DATA WITH SPEED

bitcarrier

75,000 Daily records

2,250,000 Monthly records

27,050,000 Annual records

292 KM ARTERIAL ROAD
54%

**Bloomberg

INITIATIVE FOR GLOBAL ROAD SAFETY

- Information system of real-time speed records in street sections since 2017
- Data acquisition such as speed and travel time that allow analysis and decision making.
- The system consists of 350 wifi and bluetooth sensors.
- Sensors capture public Wi-Fi and Bluetooth signals from user devices (cell phones, car Bluetooth radios, GPS, etc.)

18-20	1%	2%	1%	1%	0%	2%	1%
20-22	2%	2%	3%	2%	3%	2%	1%
22-24	11%	8%	9%	8%	4%	6%	11%

CHALLENGES IN THE DATA LINKING

- Harmonization of concepts of deaths and injuries caused by traffic.
- Protocols for information update when there is no police report.
- Generation of information exchange protocols with other entities (habeas data, agreements, technical documents).
- Classification of injuries according to severity. Data Linking with insurance companies' data bases.
- Integrate to the analysis other sources of information that can be merged as geo-referenced tickets and road safety inspections.

THANK YOU!
