Safer City Streets

The global traffic safety network for liveable cities
The importance of road safety in cities

Dynamic and liveable cities rely on efficient mobility systems, and road safety plays a large part in this. Every minute, a person dies in city traffic. Millions are killed or injured every year causing great human suffering and significant economic losses.

Crashes also nurture a feeling of insecurity. Among people killed on city streets, 8 out of 10 are pedestrians, cyclists and other vulnerable road users.

Where active mobility is seen as dangerous, efforts to promote walking and cycling are undermined. Reducing the risks of urban traffic thus not only saves lives. Safer streets encourage sustainable forms of transport and help a city to reduce pollution, cut emissions, fight congestion and have healthier citizens – in short, to make a city more liveable.

80% Share of vulnerable road users among people killed in urban traffic crashes

1 person killed every minute in city traffic

3% of GDP is lost to road traffic deaths and injuries
Networking for effective urban road safety

Cities address many challenges by working together and learning from each other. Safer City Streets links cities that want to make their citizens safer in traffic.

Safer City Streets provides city officials high-value information for better decision making. Member cities have access to policy-relevant data, a network of experts and targeted analysis. It provides global networking and learning opportunities for city officials and the possibility to carry out research on topics of common interest.

Safer City Streets is being developed by the ITF supported by the FIA Road Safety Grant Programme and modeled on the IRTAD global road safety network of countries that has run successfully for more than 25 years. The IRTAD group provides advice and support to Safer City Streets.
