International Transport Forum

Presentation of the Task Force on Collecting Data on Emerging Mobility Patterns

8th ITF Statistics Meeting

19-20 September 2022

OECD

Background

- In 2021, the ITF started a reflection to identify what are the current and future data needs and the variables that will be critical to measure.

- In June, ITF launched an explorative survey to identify possible data sources for new transport variables.

Survey

- ITF identified some key variables of interest covering different aspects of transport (e.g. infrastructure, traffic, etc.).
- Data providers were asked if these data are already collected in their countries or if there is the intention to collect them in the future.
- Data available mainly for transport equipment and emissions.
- Gaps for infrastructure, active mobility, transport costs.

Issues with data on emerging mobility patterns

- Data not often collected by statistical offices at the national level
- Lack of compatible data collection methods
- Lack of coherence in collecting, documentation and reporting methods

Task force: scope

The ITF Secretariat proposes creating a Task Force with the following objectives:

- Develop a common framework for national statistics institutes and other stakeholders to collect and compile the emerging mobility data

- Produce comparable and reliable statistics on mobility patterns

Task force: targeted data

The Task Force will focus mainly on:

- Travellers' background and travel patterns
- Travel demand of non-motorised mobility
- Vehicle-kilometres performed by bikes, shared e-scooters, shared cars, etc.

Task force: participants

- Officials from the Ministry of Transport
- National statistics officers
- Private stakeholders
- International organisations

Task force: timeline

- 19 September: participants of the meeting express their interest in joining the Task Force
- Duration of 1.5 years
- 2/3 meetings
